DETAILED ACTION

Election/Restrictions

1. Claims 1-12, 27-32 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 3/6/07.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 13-26 are rejected under 35 U.S.C. 102(b) as being anticipated by Batchelder. Batchelder discloses a dispensing unit 312 that delivers fluid to the surface of a substrate in close proximity via a hole 402 and tube 310 in chamber 1102A. Because this head delivers viscous fluids onto a substrate in close proximity, the device should be capable of generating a meniscus. This dispensing unit also delivers an environmental control gas in the form of solvent vapors through perforations 404 that surround the hole 402 on the dispensing unit. The vapors are created in a bubbling device (figure 9) wherein a carrier gas is delivered to a fluid bath and then captured for delivery via pipe 314. In regards to claims 17-19, 21- 26, Batchelder discloses that the rate of drying of the chemical is controlled by controlling the saturation level of the solvent in the local atmosphere, wherein the solvent in the local atmosphere is the solvent in the chemical. Furthermore, this process can slow the rate of drying of the

solvent in the chemical (col. 4 lines 1-10), which reads on "maintain a concentration."

Being that Batchelder discloses the structure of the applicants claimed invention as well as its ability to deliver gas and fluid via unit 312, the device should be capable of delivering high humidity gases or fluids such as IPA, ether, etc., which the examiner regards as intended use.

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
4. U.S. Patent 5,601,655 to Bok et al – discloses a proximity head capable of generating a meniscus 40 as well as a vapor introduction means (slit 2 in tube 3).
